

**API gateway:** Create an API gateway, choosing **'REST API'** as API type.

APIs > Create

### Choose the protocol

Select whether you would like to create a REST API or a WebSocket API.

☒ **REST** ☐ WebSocket

### Create new API

In Amazon API Gateway, a REST API refers to a collection of resources and methods that can be invoked through HTTPS endpoints.

☒ **New API** ☐ Clone from existing API ☐ Import from Swagger or Open API 3 ☐ Example API

### Settings

Choose a friendly name and description for your API.

API name*	<input type="text" value="API_StockInventory"/>
Description	<input type="text" value="Meant for CRUD operations"/>
Endpoint Type	<input type="text" value="Regional"/> ⓘ

- Now navigate to API we created. In 'Resources' tab under 'Actions' you can see options **'Create Resources'** to create child resource

Resources **Actions** **New Child Resource**

Use this page to create a new child resource for your resource. ⓘ

Configure as ☒ proxy resource ⓘ

Resource Name*	<input type="text" value="Manage_Inventory"/>
Resource Path*	<input type="text" value="/ manage_inventory"/>

You can add path parameters using brackets. For example, the resource path {username} represents a path parameter called 'username'. Configuring /(proxy+) as a proxy resource catches all requests to its sub-resources. For example, it works for a GET request to /foo. To handle requests to /, add a new ANY method on the / resource.

Enable API Gateway CORS ☐ ⓘ

\* Required

Cancel **Create Resource**

- Create a method 'ANY' under resource we created using option 'Action'.

Resources **Actions**  /manage\_inventory Methods

---

▼ /

**/manage\_inventory**

ANY ▼ ✓ ✕

- Integrate the Lambda function with the method('ANY') we created as like below.

Resources **Actions**  /manage\_inventory - ANY - Setup 

---

▼ /

▼ /manage\_inventory

ANY

Choose the integration point for your new method.

**Integration type** ☒ Lambda Function ⓘ

☐ HTTP ⓘ

☐ Mock ⓘ

☐ AWS Service ⓘ

☐ VPC Link ⓘ

**Use Lambda Proxy integration** ☒ ⓘ

**Lambda Region** us-east-1 ▼

**Lambda Function**  ⓘ

**Use Default Timeout** ☒ ⓘ

**Save**

- Deploy the API with the stage name say 'BETA', using option 'Action'.

Deploy API 

Choose a stage where your API will be deployed. For example, a test version of your API could be deployed to a stage named beta.

Deployment stage

[New Stage] 

Stage name\*

BETA

SDK Settings

- Create a usage plan in 'Usage plan' tab as like below for setting quota limit to our API key.

Jsage PlansCreate

Create Usage Plan

Usage Plans help you meter API usage. With Usage Plans, you can enforce a throttling and quota limit on each API key. Throttling limits define the maximum number of requests per second available to each key. Quota limits define the number of requests each API key is allowed to make over a period.

Name\* BETA\_UsagePlan

Description

Throttling

Enable throttling

Rate\* 100 requests per second

Burst\* 200 requests

Quota

Enable quota

5000 requests per Month

- Map our API with the usage plan created as like below.

BETA\_UsagePlan Actions ▾ Configure Tags

Details **API Keys** Marketplace

Edit

**ID** b9hd1j

**Name** BETA\_UsagePlan

**Description** No description.

**Rate** 100 requests per second ⓘ

**Burst** 200 requests ⓘ

**Quota** 5,000 requests per month starting on the 1st day ⓘ

Associated API Stages

Add API Stage

API	Stage	Method Throttling		
ManageStock_API ▾ ⚠	Beta ▾		✓	✕

- Now create an API key in 'API keys' tab.
